Solar Power Installation

Donated by
Regional Environmental
Action Committee
on Earth Day (April 22) 2014

Our System

The solar energy system consists of 24 x 240 watt Conergy solar modules, for a total system capacity of 5.76 kilowatts. The electricity produced goes directly to the grid, and will be used by the college.

Our Power

Power produced in year 1 = 11.4 Mwh, saving Northern Lakes College over \$1,000, with 12 tonnes less greenhouse gas emissions"

Our Part

With an expected life span of 25 years or more, this will offset over 100 tonnes of greenhouse gas emissions for the college.
